

PROFESSIONAL SUMMARY

Data Analyst with 7+ years of experience turning operational data into decisions for IT services and Ed-Tech businesses. At INKPROG Technologies, worked as the sole analyst helping small and mid-sized IT companies streamline sales, delivery, resourcing and billing through MySQL reporting models, Python automation and Tableau dashboards. At Careerpedia, helped build an end-to-end Ed-Tech operations platform (unified data model, 42-KPI dictionary, funnel, retention and dropout-risk models) that lifted conversion, course completion and placement speed, and now own the analytics workstream implementing it for Ed-Tech clients.

CORE SKILLS

Data & SQL	SQL (joins, aggregations, window functions), MySQL (Server, Workbench), data modeling, data migration, validation & reconciliation
Analysis & Modeling	Python (pandas, scikit-learn), funnel and cohort retention analysis, predictive risk modeling, operations analytics (utilisation, project profitability), Excel
BI & Reporting	Tableau, KPI design & metric dictionaries, leadership dashboards, KPI reviews, data storytelling
Delivery	Agile sprints, JIRA, Confluence, GitHub, requirement gathering, process mapping, UAT, stakeholder management, client training

PROFESSIONAL EXPERIENCE

Data Analyst, Careerpedia

Jul 2023 – Present

Client Platform Implementation

Jan 2025 – Present

Implementing Careerpedia's end-to-end operations platform for B2C tech-upskilling clients running several program lines with upfront and post-placement fee models, and migrating each client from separate tools for each function onto one platform.

- Led current-state data assessments across client marketing, pre-sales, sales, onboarding, learning, assessment, career-coaching and placement functions, profiling source data for completeness, duplicates and ID conflicts to define the migration scope.
- Mapped client data onto the platform's unified MySQL data model under a single learner ID, resolving duplicate learner records across lead, enrolment, assessment and placement sources.
- Co-authored phased integration roadmaps that sequenced modules by business impact and data readiness, agreeing cut-over priorities with client leadership and function owners.
- Built SQL reconciliation checks (record counts, key matching, field-level validation) for each migration cut-over, logging and resolving exceptions with client data owners before sign-off.
- Adapted the 42-KPI metric dictionary to each client's programs and fee model, adding program-wise lead-to-enrolment conversion, placement rate, offer CTC and post-placement fee realisation, and captured pre-go-live baselines to measure platform impact.
- Rolled out Tableau dashboards for lead-to-placement funnel, cohort retention, at-risk learners, assessment readiness and recruiter engagement, extending the internal SQL and Python models to client data.
- Managed analytics stories in JIRA across two-week sprints through UAT data validation; documented data definitions and handover guides in Confluence and trained client teams on dashboards and self-serve reporting.
- Tracked platform adoption by function after go-live and led bi-weekly KPI reviews with client stakeholders to stabilise usage and data quality.

In-house Ed-Tech Operations Platform

Jul 2023 – Dec 2024

Built Careerpedia's end-to-end platform from scratch, replacing the separate tools used by individual business groups with one centralized system for the whole organization.

- Designed a unified MySQL data model linking 7 product modules (Sales, Marketing, Operations, Learning, Assessment, Placements, Recruiter Portal) under a single learner ID, and defined a metric dictionary of 42 KPIs that became the single source of truth across teams.
- Built SQL lead-to-placement funnel models and identified the largest drop-off at the demo-class-to-enrolment stage; redirected 30% of marketing spend toward channels with 2.4× higher placement yield, lifting lead-to-paid conversion by 18%.
- Developed cohort retention analysis with SQL window functions and a Python dropout-risk model (0.81 AUC); mentors received weekly at-risk learner lists, improving course completion by 22%.
- Analysed assessment-to-offer outcomes to recalibrate readiness-score cut-offs, raising interview-to-offer conversion by 15% and reducing median time-to-placement from 74 to 52 days.
- Built Tableau dashboards for recruiter engagement (active recruiters, time-to-shortlist, shortlist-to-hire rate), increasing monthly active recruiters on the platform by 35%.
- Led bi-weekly KPI reviews for leadership and module owners, managed analytics stories in JIRA across two-week Agile sprints from requirement through UAT data validation, and version-controlled SQL and Python in GitHub.

Tools: SQL, MySQL (Workbench, Server), Python (pandas, scikit-learn), Tableau, Excel, JIRA, Confluence, GitHub

Data Analyst, INKPROG Technologies

Jul 2019 – Jun 2023

Software, design and digital marketing studio. Sole data analyst reporting to the founder, with ~80% client delivery for small and mid-sized IT companies (confidential) and ~20% internal analytics.

- Ran discovery with client stakeholders to map sales, project delivery, resourcing, billing and support workflows, auditing spreadsheet and tool data for duplicate records, manual hand-offs and reporting gaps.
- Designed MySQL reporting schemas and KPI definitions for client CRMs, admin panels and internal tools built by INKPROG's engineering team, covering pipeline, project health, resource utilisation, billing and support SLAs.
- Built Tableau dashboards for client leadership on pipeline and win rates, project budget vs actuals, billable utilisation, receivables ageing and ticket SLA compliance, replacing manually compiled Excel reports.
- Automated recurring data extraction, cleaning and reconciliation with Python (pandas) and SQL, turning month-end reporting from a manual spreadsheet exercise into a scheduled, repeatable process.
- Analysed timesheet and project data to flag budget overruns and under-utilised capacity early, helping client managers rebalance staffing and price new work on actual effort.
- Built INKPROG's own pipeline and profitability reporting for the founder (enquiry-to-proposal-to-win conversion, win rate by budget band and service line, margin by project) to inform pricing and service focus.

Tools: MySQL, Python (pandas), Tableau, Excel

Talent Acquisition Specialist, Deloitte

Oct 2018 – Apr 2019

- Managed large-scale, cross-border hiring cycles across technical domains, balancing business group needs with rapid offer delivery and operational excellence.
- Executed multi-channel sourcing strategies for diverse hires, combining Boolean search with community engagement (GitHub, Stack Overflow), direct sourcing and referrals to improve hiring outcomes.

Talent Sourcer, Microsoft

Aug 2016 – Sep 2018

- Sourced talent for high-impact engineering and leadership roles across multiple regions, leveraging diversity programs and pipeline analytics to improve talent accessibility and hiring cycle times.
- Identified high-quality candidates through job portals, LinkedIn Recruiter, GitHub and networking channels.
